ELGIN, ILLINOIS**

**2010**

**Citizens' Advisory Council  
Enrollment and Facilities Committee**

**Acknowledgments**

It is important to acknowledge those who provided assistance with the enrollment projections study and the report to the Board of Education, School District U-46.

The committee participants attended numerous meetings, beginning in September 2009. Listed below are the names of the individuals who served on the Enrollment and Facilities Committee.

**Committee Members:**

Tish Powell (Abbott MS)  
Ruth Beckner (Bartlett Elementary)  
Sarah Thompson (Century Oaks)  
Lynda Rundio, David Odman, Karen Lawson, John Kenyon and Kim Washer (Clinton)  
Bruce Bandy (Creekside)  
Debra Merges and Afshan Hamid (Eastview MS)  
Don Kaiser, Mike Goritz and Ann Miller (Fox Meadow)  
Amy Cannon (Gifford Street HS)  
Kristen Anderson and Jen Sulejmani (Harriet Gifford)  
Adam Carver (Highland)  
Diane Huecksteadt (Hillcrest)  
Heather Dewsnap and Joelle Dudek (Hilltop)  
Pam Murdock and Larry Fleig (Horizon)  
Richard Geary (Huff)  
Jaye Baird (Kenyon Woods MS)  
Edy DiGioia, Jennie Lim, Jackie Gustafsson, Laura Lamont and Stacy Poehler (Lincoln)  
Christa Olsen and Renee Sweeney (Lowrie)  
Bev Jazzurowski, Dana Weiby and Erica Franzen (Nature Ridge)  
Sharon Caddigan and Lisa Orwig (Oakhill)  
Jason Fels (Prarieview)  
Joe Hill (South Elgin HS)  
Terry Gorski (Sycamore Trails)  
Jason Schmidt (Timber Trails)  
Dawn Sharp (Washington)

**Administrative Liaisons:**

Jim Feuerborn, Tony Sanders and Barbara Bonner

**Committee Chairpersons:**

Angela Ackmann (Coleman), Sue Kerr (South Elgin HS), Gary Percy (Larsen)  
and Natalie Olsen (Fox Meadow)

## **General Overview**

The Enrollment and Facilities Committee of CAC is responsible for monitoring school capacities and enrollment and working with administration to recommend boundary changes if necessary. The Committee is also responsible for generating this report, which provides the public and the district with information about current and past enrollment, projected enrollment for the next five years, school capacity, the location of special programs, feeder patterns between elementary, middle, and high school, and the number of mobile classrooms at each school. In addition, the report tracks area births, the location of vacant land, and active or planned housing developments. This report is an important tool when considering boundary adjustments.

Enrollment projections are an estimate of future attendance patterns within the district and within specific buildings. The Enrollment and Facilities Committee develops five-year enrollment projections through data collection and evaluation of each elementary, middle and high school. Projections are affected by economics such as interest rates, availability of money, housing construction, and other factors. A multi-home development could drastically affect the projections in this report and increase enrollment more than predicted. Similarly, an economic downturn could slow home construction and cause lower enrollment or reduce the rate of student influx into the district. However, negative economic trends could also increase enrollment through the arrival of students from private institutions. Because of the multiple diverse factors impacting enrollment, it is imperative that housing developments are monitored and enrollment projections updated on an annual basis.

## **Work for 2009-2010**

For 2009-2010 the U-46 Board of Education requested that the Enrollment and Facilities Committee work with the administration in reviewing all attendance boundaries and recommending possible boundary adjustments. Priority was to be given to schools that were more than 120% of capacity. Hillcrest was identified as the school needing attention for the 2010-2011 school year based on the June 2009 Capacity study. The committee, however, was also expected to look at all boundaries for possible adjustments for the 2011-2012 school year.

The Board of Education also formalized the process of looking at boundaries. On August 17, 2009 it approved "Attendance Boundary Guidelines." This outlined the process of looking at boundaries and gave initial responsibility for recommending boundary changes to the Administration. The Enrollment and Facilities Committee was to review any recommended boundary changes and to determine whether it would develop alternative boundary proposals. Enrollment and Facilities was also responsible for holding public meetings about proposed boundary changes. The "Attendance Boundary Guidelines" are included in this document on p. 1-8. They are based on the guidelines developed by the Enrollment and Facilities Committee in 2001 which are included on p. 1-10.

The Enrollment and Facilities committee first considered what capacity numbers to use. The Enrollments and Facilities Report has included capacities based on 25, 28, or 30 students per classroom. The June 2009 "Facilities Conditions and Education Facility Assessment Summary" included capacity numbers for each school, but those were based on assumptions which differed not only from those of the Enrollment and Facilities Committee, but also from those the District uses for staffing. Because of this discrepancy, Mr. Jim Feuerborn, Interim Director of Operations, visited each school to verify the number of classrooms and developed capacity

figures based on 25 students for grades K-3 and 28 for grades 4-6, which was the staffing ratio used for the 2009-2010 school year. This report includes the traditional 25/28/30 students per classroom as well as Mr. Feuerborn's numbers, which are presented in the "Administration Capacity Breakdown."

On October 20, 2009 Mr. Feuerborn presented the Administration's recommendation for Hillcrest. This recommendation did not involve changing boundaries but rather a program change: moving 83 ELL students from Hillcrest back to their home school of Creekside. The Early Childhood program at Creekside was expected to be reduced or partially moved to Illinois Park. The Enrollment and Facilities committee did not have an alternative boundary proposal and voted to accept the Administration's recommendations which will take effect in the 2010-2011 school year.

The Enrollment and Facilities committee then began looking at possible boundary changes for 2011-2012. Mr. Feuerborn divided the district into four quadrants (west of the Fox River; Elgin east of the Fox River; the area east of Route 25 and south of Lake Street; and the area east of Route 25 and north of Lake Street). From December 2009 through March 2010 principals from elementary schools in each quadrant have presented information to the Enrollments and Facilities Committee. After the presentations the Administration presents proposed boundary adjustments. This process continues as this report is being written. The Committee chairs developed a timeline which includes these activities as well as dates for public forums and times for committee discussion. The Committee expects to work through June and complete its work on boundary recommendations in September 2010; recommendations are expected to go to the executive Committee in October; be presented to CAC General in November; be voted on by CAC General in December; and be presented to the Board of Education in December 2010 for implementation in the 2011-2012 school year.

## **District and School Enrollment Projections**

### District Enrollment

Actual enrollments over the past five years, including the current year, are presented as the initial portion of the district enrollment projection. U-46 enrollment increased from 40,294 students in school year 2005-2006 to the current 41,453 students in school year 2009-2010. This represents a growth of 1,159 students during this period or an average of approximately 232 students per year. Enrollment increased 150 students from 2008-2009 to 2009-2010.

### Pre-Schools & Kindergarten

The district has pre-school sites located at Creekside, Garfield, Huff, Illinois Park, Independence, Otter Creek, Two Rivers Head Start and Woodland Heights. All day Kindergarten is in the fourth year of operation at Illinois Park and third year at Woodland Heights.

### Elementary, Middle, and High Schools

There is a separate sheet of information for each school. The upper portion shows the actual enrollment (per grade level) for each of the past 5 years, including the current school year. Each grade level is shown, then a column for Special Ed Self Contained and the total for the school. To the right of the current year are two columns. The first indicates the number of students in Programs (SWAS, Special Education, ELL); some students in the Special Education program may be in a regular education classroom. The second column identifies (1) students who are coming from another attendance area to attend that school and (2) students who are leaving that

school to attend a school in another attendance area. These are generally students in special programs such as SWAS, ELL, or self-contained Special Ed. This information is important when considering boundary changes.

The middle portion of each sheet is the projected enrollment for the next 5 years. The same breakdown per grade level is used and is compared to actual enrollment. This method uses “survival rates” from previous years to project future enrollment. This information is used to monitor the need for program adjustments or boundary changes.

The bottom portion of the sheet identifies several factors related to classroom utilization, attendance feeder patterns, building capacity as compared to utilization, mobile classrooms and building development projections that may impact enrollment.

### School Capacity

The total number of classrooms within each building and the respective capacity are noted on each school’s enrollment/projection page. School capacity numbers are based on architectural space. For elementary schools the report uses 25, 28 and 30 students per classroom. The “blended” numbers for elementary schools from the “Administration Capacity Breakdown” are also used.

This year, middle and high school numbers use 25, 28, and 30 students per classroom (previous reports had used 25 and 28 per classroom). Thirty students per classroom in high schools and middle schools is based only on what classrooms can hold; it does not take into account what lunchrooms, halls, or lockers can comfortably handle.

General-purpose classrooms are identified by the district, and meet the requirements of accommodating general education classes. Kindergarten classrooms are identified by the district and are specifically designed to accommodate kindergarten classes only, and cannot be used for general-purpose classes. Several facilities are equipped with Special Education classrooms and cannot be used for general-purpose classes.

It should be noted that music and art classroom space has been removed from the report to reflect total building capacity at the elementary level. From a facility use perspective, any classroom can be used for general purposes unless designed for a specific purpose. Music and art classes are a part of the elementary education experience, even if a classroom is not specifically identified for this purpose.

In February 2009, the BOE adopted new staffing guideline changes beginning with the 2009-2010 school year. Grades K-3 are staffed at 25:1 and Grades 4-6 at 28:1. The “Administration Capacity Breakdown” reflects these numbers. The actual number of students in a classroom may vary from the staffing guidelines. The number of children in each grade level, needs of special programs, and legal requirements are some of the factors the district must consider when filling classroom space.

In the current (2009-2010) school year 10 elementary schools are filled to more than 90% of capacity using the 28-students-to-a-classroom formula. 24 elementary schools are filled to more than 90% of capacity using the 25-students-to-a-classroom formula, 11 of which are over 100%. Using the “Administration Capacity Breakdown” blended numbers, 14 elementary schools are filled to more than 90% capacity, of which 6 are over 100% capacity. Mobile classrooms help to add capacity to some of these schools.

At 28 students per classroom, all of the middle schools are below 90% capacity and all of the high schools are below 93% capacity. The movement of programs in middle and high schools in recent years has helped to alleviate overcrowding noted in past reports.

## **Explanation of Additional Data**

### Mobile Classrooms

This year the use of mobile classrooms has decreased. There are 61 mobile units available with a total of 95 classrooms. Of those 95 classrooms, 76 are currently in use. There are 51 classrooms in use at 15 elementary schools, none at the middle school level, and 25 at three high schools. The district has been advised by the Regional Office of Education (ROE) to review and implement a plan of action for the elimination of mobile classrooms.

### Vacant Land:

Vacant residentially zoned land within the district has been reported in the Annual Report for the last five years. At first glance, this land is starting to dwindle as more and more developments are started, with the bulk of these new developments in the northern and western areas of the district. However, there are large tracts of land that are currently occupied by contiguous large wooded estates, especially in the NE Elgin area. If the owners of these properties decide to sell to developers, these areas can produce large numbers of future students depending on whether they are incorporated into surrounding municipalities. Additionally, there are large tracks of land in the southern area of the district, which if developed would overwhelm those schools located in that part of the district. Some land within the district boundaries, particularly to the west and northwest, is currently zoned as open space and/or agricultural. Much of this land appears to be of the wetlands variety. Perhaps this type of land will not be suitable for development; at least not in its present form. The committee will continue to monitor land within the district that could become a source of future students.

### Kindergarten Projections

A committee member of E&F contacts five area hospitals (Central DuPage, Delnor, St. Alexius, Sherman, and St. Joseph) to get information about live births. Looking at births to kindergartners in U-46 five years later, helps the committee create a ratio which is used to project the number of future kindergarten students.

### Survival Rates

Survival rate is the ratio of the number of children in a grade to the number of children in the previous grade the previous year. For example, if a school has 98 third graders and had 100 second graders the year before, the survival rate for that year would be 98/100 or .98. For projecting future enrollment, the committee generally uses a 4-year average of enrollment to figure survival rate. A survival rate is determined for each grade at each school and the district as a whole. However, after major boundary changes survival rates have been handled differently, sometimes using a “weighted” average. This report uses the standard four-year survival rate for high schools for the first time since the opening of South Elgin High School.

### Development Trends

Specific details regarding current and projected developments within the U-46 attendance areas are addressed later in this report. There are several economic changes that are impacting new developments. Several of the communities served by U-46 are reporting a significant drop in

construction permits for new construction and remodeling. According to information we have received, Developer donations are off as much as 50% as compared to previous years.

### New Housing Developments

An important function of the Enrollment and Facilities Committee is to track new housing developments within our school district. The list of new subdivisions is updated each year by the committee through interviewing representatives from villages, cities and developers to obtain the information that is presented in this report.

In the current report, the committee is tracking 51 subdivisions that are either in the concept stage, in planning, approved, planned to begin construction, under construction, or close to completion. We have included all those developments that are in the concept/planning stage, under review, or have not started construction, to determine their affect on district enrollment. These include eight potential subdivisions in Bartlett, eight in Elgin, one in Hanover Park and one in South Elgin. In order to present future student enrollment figures to the Board of Education in a meaningful way, the report takes into account these developments as if they are to be “built-out” over the next three years.

The information presented on each subdivision includes the name of the subdivision; the type and number of each form of housing within the subdivision; the estimated start and completion date for the subdivision; the approximate percentage of homes yet to be completed within the subdivision; the number of students anticipated from the housing development, and the schools affected by the subdivision. All but three of the villages and cities served by School District U-46 have at least one subdivision actively under construction.

The committee is very cognizant of these new subdivisions and the schools affected by children who will potentially reside in these subdivisions. Decisions regarding the change of attendance boundaries and transfer of students are made based upon information contained in the new development portion of the report.

The estimated number of students to attend School District U-46 from potential new housing is determined by using information provided by Ehlers & Associates, Inc. (formerly Illinois School Consulting Service / Associated Municipal Consultants, Inc.). In 1998, Illinois School Consulting Service was contacted and this committee received the current “Table of Estimated Ultimate Population Per Dwelling Unit”. Slight modifications have been made in the tables to accommodate students attending private schools. Historically, the estimated number of students coming from new subdivisions based upon this modified table has been reliable.

## **Recommendations**

The Committee does not have any recommendations at this time. It does expect to present its recommendation on boundary adjustments to the Board of Education in December 2010.

**Presented to the Board of Education  
School District U-46  
August 3, 2009  
Attendance Boundary Guidelines**

- I. The U-46 Board has determined that the Citizens' Advisory Council's Enrollment and Facilities Committee shall assist the District in the process of reviewing attendance boundaries and scenarios for possible changes to attendance boundaries in the District and shall make recommendations to the Superintendent and Board regarding any changes to attendance boundaries in the District. Throughout the process, the Enrollment and Facilities Committee shall follow the following process and criteria.

Scenarios

- Each year, District administration shall review enrollment and capacity at each school to determine whether any attendance boundary changes should be recommended to the Board. District administration shall inform principals of any schools that might be affected and shall request that the principals provide staff with pertinent information that should be considered. District staff also shall develop a timeline for the attendance boundary process.
- If District staff determines that changes to any attendance boundaries are necessary, District staff shall utilize the criteria included in these guidelines to create initial attendance boundary scenarios for the Enrollment and Facilities Committee to consider. District staff may enlist assistance as it deems necessary.
- Members of the Enrollment and Facilities Committee shall review initial scenarios to determine whether they will develop additional attendance boundary scenarios for consideration by the Enrollment and Facilities Committee and for public input. In developing any additional scenarios, the Enrollment and Facilities Committee shall utilize the criteria included in these guidelines.
- During the time established by the administration, the Enrollment and Facilities Committee shall hold public input meetings on any proposed scenarios to obtain input of parents and students affected by the proposed scenarios. After these public input sessions, the Enrollment and Facilities Committee will determine whether it will recommend any changes to attendance boundaries. Upon approval of the Enrollment and Facilities Committee recommendations by the members of the Citizens' Advisory Council, the recommendations will be presented to the Superintendent and Board.

## Recommendations

- By the time established by the administration, the Superintendent shall review any recommendations of the Enrollment and Facilities Committee.
- The Superintendent shall recommend any changes to attendance boundaries. In making any recommendations, the Superintendent shall utilize the criteria and other provisions of this regulation.

## II. Criteria

The criteria to be used by the Board, the Superintendent, and the Enrollment and Facilities Committee in reviewing scenarios and determining attendance boundaries shall include:

- Capacity at a school, excluding mobile classrooms;
- Current and projected enrollment disaggregated by student groups identified in the federal No Child Left Behind Act (NCLB);
- Distance and travel time of students from a school;
- Feeder school alignment;
- Natural boundaries, such as wetlands, railroad tracks, forest preserves and main thoroughfares;
- Opportunity for siblings to attend the same school;
- Over- and under-utilization of schools in District. The District will consider a building to be over-utilized if its enrollment is projected to be at or over 120% of its program capacity without mobile classrooms and under-utilized if its enrollment is projected to be at or under 80% of its program capacity without mobile classrooms;
- Projected growth in area and future school facilities;
- Proximity of schools to where students live; and
- Stability of an attendance boundary with the goal that a school attendance boundary would not be changed in two consecutive years, unless new school construction requires a change.

**CAC Enrollment and Facilities Committee**  
**Guidelines for the Development of School Attendance Boundaries**  
**2001-2009**

When it is determined that a boundary change is necessary, this committee's recommendation will follow these guidelines whenever possible, giving full consideration to all the schools being affected by the boundary change. The following guidelines were developed and voted on by the Enrollment and Facilities Committee in May of 2001.

The seven basic guidelines are as follows:

1. The principals of the schools being affected by the boundary changes should be informed and pertinent information presented by them should be considered.
2. All students who are considered "walkers" to a school should remain in that school attendance boundary. See below for a brief description of walkers.
3. Natural boundaries such as wetlands, railroad tracks, forest preserves, and main thoroughfares may be considered appropriate dividing lines.
4. Mobile classrooms should be eliminated wherever possible.
5. Consider the estimated enrollment generated from new construction, and allow for future growth.
6. Assign new developments to an attendance area while they are in the planning stages.
7. Additional guidelines may be used by the committee as appropriate.

These guidelines will be considered when developing attendance boundaries. However, it will not always be possible to adhere to them.

"Walkers" are defined by the State of Illinois as students who live 1.5 miles or less from their home school, unless there exists a hazardous condition, such as a four lane road, no sidewalks, and such, between their home and school.

DATE: October 20, 2009  
TO: Enrollment and Facilities Committee  
FROM: Jim Feuerborn  
SUBJECT: Administration's Recommendation for Enrollment Adjustments at Hillcrest Elementary

We would propose the following adjustment to the enrollment at Hillcrest. In addition to these recommendations the committee may or may not wish to look at other possible changes to the boundaries for Hillcrest for school year 2010 - 2011.

Issue 1: The capital study's review of building capacity identified Hillcrest as the school with the highest deficit of capacity using the "area adjusted" capacity of 505 identified by Magellan.

Issue 2: We have reviewed the building capacity looking at the Enrollment and Facility Committee's capacities as shown in their annual report.

Issue 3: We have resurveyed each elementary school and have identified the actual number of classrooms including art, music and significant special education rooms in addition to the number of general education classrooms.

Issue 4: We have reviewed the individual building capacities using various staffing levels, 25, 28, and 30 per classroom. All schools were assumed to use one room for art and one room for music; these rooms are not included in the capacity of the school.

Issue 5: We did not include any mobile classrooms in the capacity of any school.

Issue 6: We believe these revised capacities are the most appropriate for establishing attendance boundaries.

Issue 7: We can use the current staffing practices including consideration for the 10% reduction for English Language Learner classes as well as the staffing patterns used for Early Childhood and Special Education classes to assist in modifying capacity considerations.

October 20, 2009

Recommendation for Enrollment Adjustments at Hillcrest Elementary

Page 2

Our recommendation is as follows:

1. We return students from Creekside's attendance zone who currently attend Hillcrest, to their home school. This includes 3 regular education students and 67 Kindergarten through fourth grade students. The 5 fifth graders would remain at Hillcrest as they would not be of a sufficient number to support a sixth grade class at their grade level at Creekside. There would also be an unknown additional number of incoming Kindergarteners next year who would obviously attend Creekside, this year that number is 13. If the kindergarten number is assumed to be the same as this year we would in effect be moving 83 students out of Hillcrest and back to their home school.
2. This change would bring the Hillcrest enrollment down from the current 655 to 572. The capacity based on my analysis for Hillcrest using current staffing targets is 605. If you factor in the current number of ELL sections you would drop that capacity by 39 due to the 90% rule, resulting in a capacity of 566. Next year the number of ELL sections would be less, therefore your capacity would only be lowered by approximately 29 resulting in a capacity of 576. The newly projected enrollment of 572 would be under the 576 capacity.
3. If this recommendation were to occur you should see a reduction of at least 3 sections resulting in the option to move art and/or music off the cart and close mobile classrooms at Hillcrest.
4. We would likely be opening the Creekside ELL program with 3 combination sections.
5. This change would reduce the number of buses dropping and picking up at Hillcrest by 2 or 3.
6. Currently all of the Creekside children attending Hillcrest are provided transportation, if this recommendation is implemented 75% of the children would become walkers and the remainder would ride the bus already picking up Creekside students in their neighborhood.
7. I have not run the NCLB matrix on this proposal; however, a look at the demographics for Creekside and Hillcrest indicate this move would increase diversity at Creekside.
8. This recommendation would not require a boundary change by the Board of Education but rather a movement of a program which is a function of administration.
9. There is room at Creekside due to the reduction in the Early Childhood use of this facility. There are currently 3 rooms available and with the expected relocation of additional Early Childhood classes to the Illinois Park site there will be more rooms available next year.
10. The impact on Creekside would include bringing children back to their home school by adding English Language Learner classes to this school.
11. There may be ELL refusals that currently attend Creekside but have refused program services because they did not want to leave their home school, they may choose now to participate.

JPF:dd

# CAC Committee Member Code of Conduct

*CAC Committees are governed by the council's bylaws and follow procedures outlined in the Illinois Open Meetings Act and Roberts Rules of Order. Committee members are expected to adhere to the following:*

1. **Be respectful and professional in dealing with committee members, the community, media and U-46 staff.** As members of CAC, you are expected to conduct yourself in a businesslike manner. Members should act with integrity and strong character; they must deal peacefully when confronted with anger, insults and disagreements. This includes refraining from being argumentative, dismissive, sarcastic, condescending or disrespectful in any way. Slanderous remarks, foul language, arguing, shouting or aggressive behavior of any sort will not be permitted.
2. **Be respectful of committee leadership and meeting objectives.** It is understood that the chairperson(s) has the right to call a recess or to declare a person out of order if disputes cannot be resolved in a peaceful manner. Therefore, members will refrain from behavior that disrupts the meeting in progress, such as speech-making, sermonizing, speaking off topic or outbursts.
3. **Be fair and flexible.** Every committee member has a right to be heard and voice their opinion in a professional manner. Members need to be courteous to one another and allow others the opportunity to share their opinions. Discussions must be inclusive of all viewpoints and committee members should be open to new ideas. It is the committee's responsibility to ensure that the district's and students' best interests are upheld. Interruptions of a speaker will not be tolerated.
4. **Be a good listener.** Members should "listen to understand." Every idea, thought, comment, question should be respectfully considered. Every speaker has the freedom to share what is on their mind in a professional manner without threat of being disrespected by others.
5. **Be an effective communicator.** Members should be deliberate in their communication, keeping language simple and explaining new ideas and concepts in a respectful way. Members are responsible for sharing information with their schools and for ensuring that their schools opinions and concerns are shared with the committee. It is the committee's responsibility to gain input from parties not represented on the committee who might be affected by committee work.
6. **Be a representative of your school and community.** Members of CAC represent their individual school and the community it serves. Each school is entitled to one vote, regardless of how many members each school has on a committee, per CAC bylaws. Members are responsible for sharing information with their schools/communities and soliciting feedback prior to decision-making/voting. Members will work with their fellow school representatives to build a consensus that represents their school's interests.

## **Committee Attendance Policy:**

Member participation and attendance is crucial in the process of recommending boundary adjustments to school attendance areas. Therefore, the E&F Committee Chairs have implemented a committee attendance policy, as outlined in the CAC bylaws. The policy is as follows:

**To maintain certification as a voting school on the E&F Committee, a school must not miss more than three consecutive committee meetings. Any school with no members present for three consecutive meetings may be de-certified by the committee chairs due to non-participation.** De-certification would prevent the school from voting on recommendations and reports at the committee level.

# New high school boundaries went into effect. (Elementary and Middle School boundaries went into effect 2004-2005)

(A) Actual enrollment for each school year as of the last school day in September, for the years listed through 2009-2010.

(B) Includes the following: All Self-Contained Special Education classes including Pre-school, Moving-On, Low Incidence, Private Placement, and Home & Hospital.

(C) Includes the following: Adult Education and Alternative Education.

(D) The survival rate for each grade level is an average of the survival rates at each grade level for the previous years.

(E) Kindergarten numbers are based upon live births from area hospitals for years 1998-1999 thru 2008-2009. A ratio of kindergarten enrollments to live births was developed for kindergarten enrollment years 2004-2005 thru 2009-2010 based on live births from 1998-1999 thru 2003-2004. The average ratio was applied to the recorded births for 2004-2005 thru 2008-2009 to obtain kindergarten projections for years 2010-2011 thru 2014-2015. Refer to Kindergarten Projections on the following page.

(F) The "Special Education" Projection is calculated using the following formul

$$F = (\text{Current enrollment B/Current K-12}) * \text{K-12 Projected Enrollment}$$

(G) The "other" projection is calculated using the following formula:

$$G = (\text{Current enrollment C/Current K-12}) * \text{K-12 Projected Enrollment}$$

**Note:**

25 students per classroom = Optimal goal whenever possible  
 28 students per classroom = General guidelines for staffing purposes  
 30 students per classroom = Average physical capacity of individual space

Determining capacity at 25 to a classroom: number of classrooms x 25 = capacity  
 Determining capacity at 28 to a classroom: number of classrooms x 28 = capacity  
 Determining capacity at 30 to a classroom: number of classrooms x 30 = capacity  
 Kindergarten classrooms are counted twice to determine capacity.

\* The schools marked by an asterisk are currently using mobile classrooms. Refer to the individual school page to confirm the number of mobile classrooms shown as currently in use. These schools are listed twice - to show the architectural capacity on the first line, and the actual capacity (architectural capacity plus mobile classrooms in use) on the second line.

Pre-K: In addition to General Education (Regular Ed., ELL, Self-contained Spec. Ed.) classes and/or All Day Kindergarten classes, these schools also offer Pre-School classes. Because of this, the "Percentage Filled" may appear artificially low. These schools are in fact more utilized than the data would suggest.

# New high school boundaries went into effect.

Elementary and Middle School boundaries went into effect 2004-2005.

(d) Survival rates and projections may vary by school due to special programs, and do not include students from new developments that may substantially impact some schools.

(e) Based on the New Developments pages: the total number of students projected from the developments located in this school's attendance area for the school years listed.

(g) Actual Enrollment: 2005-2006 and later data were adjusted to 'true up' Special Education numbers per Administration. Prior Years were not adjusted.

\* S-C Special Education projections are based on the district average S-C Special Education enrollment of 11, times the special concerns site recommendation of: 2

\*\* The Bilingual enrollment is included in the Actual Enrollment most recent school year data.

**Note:**

There are only three significant categories provided in this chart. Because of the similarity of yields of all types of attached single-family dwelling units, only one category is provided. The same is true of apartments; thus only one category. Because of the relatively short history of some newer types of detached and attached single-family units, individual evaluations may be necessary.

### Residentially Zoned Vacant Land in U-46

The committee continues to track vacant land in the district that is zoned for residential development. Large tracts of vacant, residentially zoned property exist in the southern end of the district. A considerable amount of land in the far north central and far western areas that fit into this category over the past few years, is currently under development (anywhere from proposed to under construction). This committee and the District need to continue this work, especially with local Municipal and Township officials, to obtain pertinent information regarding vacant residentially zoned land. This needs to be an ongoing process to ensure that the district is aware of land that could produce future students, and if necessary, become involved in obtaining land for future school sites while the land is still available for such a need.

<u>Community</u>	<u>Acreeage</u>	<u>Schools affected</u>
Bartlett (DuPage County)	3.84 (potential commercial) 14 (adjacent to BHS) 27.86 (Stearns & Munger - pot'l com'l) 20 (Bartlett Rd/ICRR)	Centennial/Eastview/BHS Hawk Hollow/Eastview/BHS Liberty/Kenyon Woods/SEHS Sycamore Trails/Eastview/BHS
