## Statement from the 2011-2012 E&F Committee

---

In August 2011, the E&F co-chairs met with administration to discuss the timeframe for implementing recommendations at the high and low-capacity elementary schools. At that time, it was decided that there would be an 18 month plan, in which the E&F committee would make recommendations about the 2013-2014 school year. In our current report, the committee states that those recommendations would be forthcoming in a second report to be presented in fall 2012.

Since our first report was approved, it has been brought to the attention of our committee that the possibility of any recommendations, regarding boundary adjustments or moving program locations, being approved is very unlikely. Because the process is so labor intensive, the committee has decided that going forward with recommendations is not useful at this time. Because of the vast experience and knowledge of the E&F members, we are concerned that by halting our work again we will lose these valuable members.

The committee would like to stress the importance of implementing some changes at the high-capacity schools as these schools have been overcrowded for over five years. The committee has been recommending that some boundary adjustments need to take place since 2007. By delaying these necessary adjustments, these same elementary schools have remained at high-capacity year after year. We hope that this issue is revisited as many of these elementary students have been in high-capacity schools for their entire elementary experience. With 103 empty or repurposed elementary classrooms throughout the district, there are sensible solutions to utilize our schools in a more efficient manner which may also serve to save the district money by turning busses into walkers, moving children closer to their home school to save on transportation costs, and reduce the use of mobiles by utilizing the low-capacity schools more efficiently. As a committee, it is our strong belief that changes do need to be made and there are changes that can be made without a major overhaul of boundaries.

# 2011 – 2012 CAC Enrollment and Facilities Report

## School District U-46

### TABLE OF CONTENTS

#### Section 1

Acknowledgments	3
General Overview	4
Work for 2011-2012	5
District & School Enrollment Projections	7
Explanation of Additional Data	9
Recommendations	12
BOE Attendance Boundary Guidelines (2009)	13
E&F Attendance Boundary Guidelines (2001-2009)	15
CAC Committee Member Code of Conduct	16
CAC Committee Attendance Policy	18
5-Year Utilization Overview	1-A
Classroom Utilization	1-B

#### Section 2 Enrollment Projections

New Housing Projections within School District U-46	3-1
Table of Estimated Ultimate Population per Dwelling Unit	3-4
Residentially Zoned Vacant Land in U-46	3-5
School Feeder Patterns	3-6

**SCHOOL DISTRICT U-46  
ELGIN, ILLINOIS  
2011-2012  
Citizens' Advisory Council  
Enrollment and Facilities Committee  
Acknowledgments**

It is important to acknowledge those who provided assistance with the enrollment projections study and the report to the Board of Education, School District U-46. Listed below are the names of the individuals who served on the Enrollment and Facilities Committee for the 2011-2012 school year.

**Committee Members:**

Ruth Beckner (Bartlett Elementary)  
Larry Fleig (Bartlett HS)  
Lynda Rundio, David Odman, John Kenyon and Kim Wascher (Clinton)  
Christa Olsen (Creekside)  
Don Kaiser, (Fox Meadow)  
Nate Warkel (Glenbrook)  
Adam Carver (Highland)  
Douglas Edgar (Kimball MS)  
Renee Sweeney (Larkin HS)  
Dana Weiby (Nature Ridge)  
Nathan Gac, Brian Maduza, Joe Fowler, Roger Wallace (Prarieview)  
Joe Hill (South Elgin HS)  
Glenn Tinio (Wayne)

*A special thank you goes to  
Joe Hill (SEHS),  
who is the force behind our data spreadsheets.*

**Administrative Liaisons:**

Jeff King

**Committee Chairpersons:**

Laura Lamont (Larsen MS)  
Bev Jaszczurowski (Nature Ridge)

Approved by Committee – 02/21/2012  
Approved by CAC Executive Committee -03/22/2012  
Approved by CAC General – 04/12/2012

## **General Overview**

The Enrollment and Facilities Committee of CAC is responsible for monitoring school capacities and enrollment and working with administration to recommend boundary and facility changes if necessary. The Committee is also responsible for generating this report, which provides the public and the district with information about current and past enrollment; projected enrollment for the next five years; school capacity; the location of special programs; feeder patterns between elementary, middle, and high school; and the number of mobile classrooms at each school. In addition, the report tracks area births, the location of vacant land, and active or planned housing developments. This report is an important tool when considering boundary adjustments.

Enrollment projections are an estimate of future attendance within the district and within specific buildings. The Enrollment and Facilities Committee develops five-year enrollment projections through data collection and evaluation of each elementary, middle and high school. Projections are affected by economics such as interest rates, availability of money, housing construction, and other factors. A multi-home development could drastically affect the projections in this report and increase enrollment more than predicted. Similarly, an economic downturn could slow home construction and cause lower enrollment or reduce the rate of student influx into the district.

However, negative economic trends could also increase enrollment through the arrival of students from private institutions. Because of the multiple diverse factors impacting enrollment, it is imperative that housing developments are monitored and enrollment projections updated on an annual basis.

## Work for 2011-2012

Based on the recommendations made in last year's report, the Board of Education charged the committee with monitoring the schools labeled as high and low capacity; examining the usefulness of the Census Data as compared to the live birth data the report currently uses; and monitoring the schools which house the Dual Language Two-Way program. The committee began its work by looking at the current classroom utilization of each elementary school. The committee developed a spreadsheet to provide details of how each elementary school is being used (see page 1-B). This spreadsheet offers a snapshot of the different types programs in each building and how many classrooms are used by each program as well as the number of empty rooms available in each building. It documents 103 empty classrooms throughout the district at the elementary level. The committee began with the schools labeled as low-capacity and worked its way up to the high-capacity schools.

The Committee will continue to monitor the enrollment patterns at Ontarioville and Lincoln. Ontarioville and Lincoln will continue to be at or above 100% next school year as well as rise to 110% and 120% capacity respectively by 2016-2017. Other schools to watch are Century Oaks, Harriet Gifford, Oakhill, Willard, Washington and Otter Creek, which are projected to be at or above 95% by 2016-2017. The committee will also continue to monitor any elementary schools that are currently using mobiles. These schools are Channing, Coleman, Garfield, Laurel Hill, Lincoln, Lowrie, Nature Ridge, Ontarioville, and Washington. The committee feels it's important to revisit boundary changes or administrative adjustments for these schools before the situation becomes critical. All of these schools house special programs, which reduce the schools' actual capacity. The committee intends to provide the Administration and the Board of Education more specific recommendations regarding these high-capacity schools in a secondary report in the fall of 2012.

The Committee will continue to monitor the low-capacity schools for the *possibility* of re-utilizing them to relieve the high-capacity schools and/or closing one of its low-capacity elementary schools to help reduce operating expenses. By 2015-2016, nine schools will fall below 65%; five will be below 60% and two below 40%. Several of these schools are in adjacent attendance zones, clustered in the southeast quadrant of the district. The committee intends to provide the Administration and the Board of Education more specific recommendations regarding these low-capacity schools in a report in the fall of 2012.

The Board of Education has defined schools to be high-capacity at 120% and under-capacity at 80% or less (see BOE Attendance Boundary Guidelines, (see p. 14). For the purpose of this report, the committee made special note of schools with capacities at 95% or above and those at

65% or below for several reasons. First, these figures do not take into consideration the reduced staffing ratio for Bilingual Education (90% of General Ed) or other special programs (such as self-contained special education and all-day kindergarten), which would mean the schools that house these programs may be using space differently and would have less space than the stated capacities. Second, these figures for elementary schools are based on the current staffing ratios of 28:1 K-3 and 33:1 4-6. If the district were to go back to the previous staffing ratios of 25:1 K-3 and 28:1 4-6 all schools would have less space than the stated capacities in this report.

For 2012-2013 there are projected to be two schools above 95% capacity and 9 schools below 65% capacity, five of which are below 60% and two below 50% (See pg. 1-A in the report.) By 2016-2017, eight schools will be above 95% capacity, one of which will be at more than 120%; and 9 schools will fall below 65%, six of which will be below 60% and two below 40%.

For 2012-2013, at 28 students per classroom, all of the middle schools are projected to remain below 90% capacity; three will be below 65% and by 2016-2017, four will be at or below 65%. At 28 students per classroom, for 2012-2013, all high schools will be below 95% capacity. By 2016-2017, all five of the high schools are projected to remain at or below at 28/class. The movement of programs in middle and high schools in recent years has helped to alleviate overcrowding noted in past reports.

The committee reviewed census data from six towns that feed into U-46 to determine if the available data was useful in validating our live birth data or if it could be useful in replacing this data. It was determined that the data gathered was not as specific as needed for the purpose of projecting kindergarten enrollment. Census data is obtained every 10 years and records data in terms of ranges of age. For example it reports numbers of people in 0-5 age range for the year 2010 in each town. This data will is not detailed enough or recorded often enough to be useful for the purposes of this report.

The committee continues to review data concerning the Dual Language Two-Way Program currently at 7 schools in the district. It was brought to the committee's attention by the district liaison that these schools are being considered as feeder schools for this program. The committee feels this may have a serious impact on enrollment for some schools given that students would be feeding into them. The committee was specifically concerned about using Harriet Gifford, Nature Ridge and Otter Creek as feeder schools, as they already have enrollment issues. The monitoring of this program is an ongoing process for the committee as the program is new for 6 of the 7 schools.

# District and School Enrollment Projections

## **District Enrollment**

Actual enrollments over the past five years, including the current year, are presented as the initial portion of the district enrollment projection. U-46 enrollment decreased from 41,087 students in school year 2007-2008 to the current 40,760 students in school year 2011-2012. This represents a reduction of 327 students during this period or an average of approximately 65 students per year. Enrollment decreased 24 students from 2010-2011.

## **Pre-Schools & Kindergarten**

The district has pre-school sites located at Creekside, Garfield, Huff, Illinois Park, Independence, Liberty, Otter Creek, Ridge Circle, Sycamore Trails, and Two Rivers Head Start. Full-day Kindergarten classes are also located at Garfield, Oakhill, Ontarioville and Ridge Circle. A preschool program was added at Sycamore Trails after the start of the school year and is not reflected in this year's Enrollment or Projection numbers.

## **Elementary, Middle and High Schools**

There is a separate sheet of information for each school. The upper portion shows the actual enrollment (per grade level) for each of the past five years, including the current school year. Each grade level is shown, then a column for Special Ed Self Contained and the total for the school. To the right of the current year are two columns. The first indicates the number of students in Programs (SWAS, Special Education, ELL); some students in the Special Education program may be in a regular education classroom. The second column identifies (1) students who are coming from another attendance area to attend that school and (2) students who are leaving that school to attend a school in another attendance area. These are generally students in special programs such as SWAS, ELL, or self-contained Special Ed. This information is important when considering boundary changes.

The middle portion of each sheet is the projected enrollment over the next five years. The same breakdown per grade level is used and compared to actual enrollment. This method uses "survival rates" from previous years to project future enrollment. This information is used to monitor the need for program adjustments or boundary changes.

The bottom portion of the sheet identifies several factors related to classroom utilization, attendance feeder patterns, building capacity as compared to utilization, mobile classrooms and building development projections that may impact enrollment.

### **School Capacity**

The total number of classrooms within each building and the respective capacity are noted on each school's enrollment/projection page. School capacity numbers are based on architectural space. For elementary schools the report uses 25, 28 and 30 students per classroom. Also included for each elementary school is an "Administration Capacity Breakdown" of "blended" numbers, which reflects how staffing ratios affect the school's capacity. (See pg. 9 for more information.)

General-purpose classrooms are identified by the district and meet the requirements of accommodating general education classes. Kindergarten classrooms are identified by the district and are specifically designed to accommodate kindergarten classes. Several facilities are equipped with specially designed Special Education classrooms and cannot be used for general purpose classes.

It should be noted that music and art classroom space has been removed from the report to reflect total building capacity at the elementary level. From a facility use perspective, any classroom can be used for general purposes unless designed for a specific purpose. Music and art classes are a part of the elementary education experience, even if a classroom is not specifically identified for this purpose.

This year, middle and high school numbers use 25, 28, and 30 students per classroom (previous reports had used 25 and 28 per classroom). Thirty students per classroom in high schools and middle schools is based only on what classrooms can hold; it does not take into account what lunch rooms, halls, or lockers can comfortably handle.

In February 2009, the Board Of Education adopted new staffing guideline changes beginning with the 2009-2010 school year. Grades K-3 are staffed at 28:1 and Grades 4-6 at 33:1. The "Administration Capacity Breakdown" reflects these numbers. The actual number of students in a classroom may vary from the staffing guidelines. The number of children in each grade level, the needs of special programs, and legal requirements are some of the factors the district must consider when filling classroom space.

## **Explanation of Additional Data**

### **5-Year Utilization Overview**

The Overview chart uses the “Administration Capacity Breakdown” numbers for elementary schools to show capacity trends over the next five years, if the staffing ratios were to remain as they currently are: 28:1 K-3 and 33:1 4-6. These figures do not take into consideration the reduced staffing ratio for Bilingual Education (90% of General Ed) or other special programs (such as self-contained special education and all-day kindergarten), which would mean the schools that house these programs may be using space differently and would have less space than the stated capacities. Middle and High School percentages are based on the staffing recommendation of 28 students per classroom.

### **Administration Capacity Breakdown**

This chart was developed by Administration in 2009 to reflect how staffing ratios might impact the capacity at a school. School enrollment projection sheets had historically only shown capacity at 25, 28 and 30 students. However, staffing ratios vary between primary and intermediate elementary levels so gauging the actual capacity was difficult. The Administration Capacity Breakdown provides an estimate of the number of sections a school might accommodate by kindergarten, grades 1-3 and grades 4-6. The number of sections is then multiplied by the current staffing ratio for that level; then all three subtotals are added to provide a better estimate of the total capacity. These numbers do not include mobiles; they do reflect specially designed self-contained special education classrooms. The current Administration Capacity Breakdown numbers are based on the current 28:1 K-3 and 33:1 4-6 staffing ratios. Decreasing the ratio would make space issues even more critical at the high capacity sites.

### **Mobile Classrooms**

The district has 46 mobiles available for a total of 77 classrooms. There are currently 29 mobile classrooms in use. This is an increase of 8 from last year.

### **Vacant Land**

Vacant residentially zoned land within the district has been reported in the Annual Report for the last seven years. At first glance, this land is starting to dwindle as more and more developments are started, with the bulk of these new developments in the northern and western areas of the district. However, there are large tracts of land that are currently occupied by contiguous large wooded estates, especially in the NE Elgin area. If the owners of these properties decide to sell to developers, these areas can produce large numbers of future students depending on whether they are incorporated into surrounding municipalities. Additionally, there are large tracks of land in the southern area of the district, which if developed would overwhelm those schools located in that part of the district. 67 acres adjacent to Bartlett H.S. are currently being sought by a developer. Some land within the district boundaries, particularly to the west and northwest, is currently zoned as open space and/or agricultural. Much of this land appears to be of the

wetlands variety. Perhaps this type of land will not be suitable for development; at least not in its present form. The committee will continue to monitor land within the district that could become a source of future students.

### **Kindergarten Projections**

A committee member of E&F contacts five area hospitals (Central DuPage, Delnor, St. Alexius, Sherman, and St. Joseph) to get information about live births. Looking at births to kindergarteners in U-46 five years later, helps the committee create a ratio which is used to project the number of future kindergarten students. St. Joseph closed its maternity ward in September 2009. It appears that the birth rates for other area hospitals have increased thereby offsetting the decline at St. Joseph.

### **Survival Rates**

Survival rate is the ratio of the number of children in a grade to the number of children in the previous grade the previous year. For example, if a school has 98 third graders and had 100 second graders the year before, the survival rate for that year would be 98/100 or .98. For projecting future enrollment, the committee generally uses a 4-year average of enrollment to figure survival rates. A survival rate is determined for each grade at each school and the district as a whole. However, after major boundary changes survival rates have been handled differently, sometimes using a “weighted” average.

### **Development Trends**

Specific details regarding current and projected developments within the U-46 attendance areas are addressed later in this report. There are several economic changes that are impacting new developments. Several of the communities served by U-46 are reporting a significant drop in construction permits for new construction and remodeling. According to information we have received, developer donations are off as much as 50% as compared to previous years.

### **New Housing Developments**

An important function of the Enrollment and Facilities Committee is to track new housing developments within our school district. The list of new subdivisions is updated each year by the committee through interviewing representatives from villages, cities and developers to obtain the information that is presented in this report.

In the current report, the committee is tracking 50 subdivisions that are either in the concept stage, in planning, approved, planned to begin construction, under construction, or close to completion. We have included all those developments that are in the concept/planning stage, under review, or have not started construction, to determine their effect on district enrollment. These include six potential subdivisions in Bartlett, eight in Elgin, one in Hanover Park, one in South Elgin and one in Streamwood. In order to present future student enrollment figures to the

Board of Education in a meaningful way, the report takes into account these developments as if they are to be “built-out” over the next three years.

The information presented on each subdivision includes the name of the subdivision; the type and number of each form of housing within the subdivision; the estimated start and completion date for the subdivision; the approximate percentage of homes yet to be completed within the subdivision; the number of students anticipated from the housing development, and the schools affected by the subdivision. All but three of the villages and cities served by School District U-46 have at least one subdivision actively under construction.

The committee is very cognizant of these new subdivisions and the schools affected by children who will potentially reside in these subdivisions. Decisions regarding the change of attendance boundaries and transfer of students are made based upon information contained in the new development portion of the report.

The estimated number of students to attend School District U-46 from potential new housing is determined by using information provided by Ehlers & Associates, Inc. (formerly Illinois School Consulting Service/Associated Municipal Consultants, Inc.). In 1998, Illinois School Consulting Service was contacted and this committee received the current “Table of Estimated Ultimate Population per Dwelling Unit.” Slight modifications have been made in the tables to accommodate students attending private schools. Historically, the estimated number of students coming from new subdivisions based upon this modified table has been reliable.

## **Recommendations**

### **RECOMMENDATION: Census Data**

The Committee recommends that Administration and the Committee to continue to use the live birth data without the census data in completing its report and calculating kindergarten projections.

**Presented to the Board of Education  
School District U-46  
August 3, 2009**

**Attendance Boundary Guidelines**

I. The U-46 Board has determined that the Citizens' Advisory Council's Enrollment and Facilities Committee shall assist the District in the process of reviewing attendance boundaries and scenarios for possible changes to attendance boundaries in the District and shall make recommendations to the Superintendent and Board regarding any changes to attendance boundaries in the District. Throughout the process, the Enrollment and Facilities Committee shall follow the following process and criteria.

With pertinent information that should be considered. District staff also shall develop a timeline for the attendance boundary process.

If District staff determines that changes to any attendance boundaries are necessary, District staff shall utilize the criteria included in these guidelines to create initial attendance boundary scenarios for the Enrollment and Facilities Committee to consider. District staff may enlist assistance as it deems necessary.

Members of the Enrollment and Facilities Committee shall review initial scenarios to determine whether they will develop additional attendance boundary scenarios for consideration by the Enrollment and Facilities Committee and for public input. In developing any additional scenarios, the Enrollment and Facilities Committee shall utilize the criteria included in these guidelines.

During the time established by the administration, the Enrollment and Facilities Committee shall hold public input meetings on any proposed scenarios to obtain input of parents and students affected by the proposed scenarios. After these public input sessions, the Enrollment and Facilities Committee will determine whether it will recommend any changes to attendance boundaries. Upon approval of the Enrollment and Facilities Committee recommendations by the members of the Citizens' Advisory Council, the recommendations will be presented to the Superintendent and Board.

**Recommendations**

By the time established by the administration, the Superintendent shall review any recommendations of the Enrollment and Facilities Committee.

The Superintendent shall recommend any changes to attendance boundaries. In making any recommendations, the Superintendent shall utilize the criteria and other provisions of this regulation.

## Criteria

The criteria to be used by the Board, the Superintendent, and the Enrollment and Facilities Committee in reviewing scenarios and determining attendance boundaries shall include:

- Capacity at a school, excluding mobile classrooms;
- Current and projected enrollment disaggregated by student groups identified in the federal No Child Left Behind Act (NCLB);
- Distance and travel time of students from a school;
- Feeder school alignment;
- Natural boundaries, such as wetlands, railroad tracks, forest preserves and main thoroughfares;
- Opportunity for siblings to attend the same school;
- Over- and under-utilization of schools in District: . The District will consider a building to be over-utilized if its enrollment is projected to be at or over 120% of its program capacity without mobile classrooms and under-utilized if its enrollment is projected to be at or under 80% of its program capacity without mobile classrooms;
- Projected growth in area and future school facilities;
- Proximity of schools to where students live; and
- Stability of an attendance boundary with the goal that a school attendance boundary would not be changed in two consecutive years, unless new school construction requires a change.

**CAC Enrollment and Facilities Committee**  
**Guidelines for the Development of School Attendance Boundaries**  
**2001-2009**

When it is determined that a boundary change is necessary, this committee's recommendation will follow these guidelines whenever possible, giving full consideration to all the schools being affected by the boundary change. The following guidelines were developed and voted on by the Enrollment and Facilities Committee in May of 2001.

**The seven basic guidelines are as follows:**

1. The principals of the schools being affected by the boundary changes should be informed and pertinent information presented by them should be considered.
2. All students who are considered "walkers" to a school should remain in that school attendance boundary. See below for a brief description of walkers.
3. Natural boundaries such as wetlands, railroad tracks, forest preserves, and main thoroughfares may be considered appropriate dividing lines.
4. Mobile classrooms should be eliminated wherever possible.
5. Consider the estimated enrollment generated from new construction, and allow for future growth.
6. Assign new developments to an attendance area while they are in the planning stages.
7. Additional guidelines may be used by the committee as appropriate.

These guidelines will be considered when developing attendance boundaries. However, it will not always be possible to adhere to them.

"Walkers" are defined by the State of Illinois as students who live 1.5 miles or less from their home school, unless there exists a hazardous condition, such as a four lane road, no sidewalks, and such, between their home and school.

## CAC Committee Member Code of Conduct

*CAC Committees are governed by the council's bylaws and follow procedures outlined in the Illinois Open*

*Meetings Act and Roberts Rules of Order. Committee members are expected to adhere to the following:*

**Be respectful and professional in dealing with committee members, the community, media and U-46 staff.** As members of CAC, you are expected to conduct yourself in a businesslike manner. Members should act with integrity and strong character; they must deal peacefully when confronted with anger, insults and disagreements. This includes refraining from being argumentative, dismissive, sarcastic, condescending or disrespectful in any way. Slanderous remarks, foul language, arguing, shouting or aggressive behavior of any sort will not be permitted.

**Be respectful of committee leadership and meeting objectives.** It is understood that the chairperson(s) has the right to call a recess or to declare a person out of order if disputes cannot be resolved in a peaceful manner. Therefore, members will refrain from behavior that disrupts the meeting in progress, such as speech-making, sermonizing, speaking off topic or outbursts

**Be fair and flexible.** Every committee member has a right to be heard and voice their opinion in a professional manner. Members need to be courteous to one another and allow others the opportunity to share their opinions. Discussions must be inclusive of all viewpoints and committee members should be open to new ideas. It is the committee's responsibility to ensure that the district's and students' best interests are upheld. Interruptions of a speaker will not be tolerated.

**Be a good listener.** Members should "listen to understand." Every idea, thought, comment, question should be respectfully considered. Every speaker has the freedom to share what is on their mind in a professional manner without threat of being disrespected by others.

**Be an effective communicator.** Members should be deliberate in their communication, keeping language simple and explaining new ideas and concepts in a respectful way. Members are responsible for sharing information with their schools and for ensuring that their schools opinions and concerns are shared with the committee. It is the committee's responsibility to gain input from parties not represented on the committee who might be affected by committee work.

**Be a representative of your school and community.** Members of CAC represent their individual school and the community it serves. Each school is entitled to one vote, regardless of how many members each school has on a committee, per CAC bylaws. Members are responsible for sharing information with their schools/communities and soliciting feedback prior to decision-making/voting. Members will work with their fellow school representatives to build a consensus that represents their school's interests.

## **CAC Committee Member Attendance Policy:**

Member participation and attendance is crucial in the process of recommending boundary adjustments to school attendance areas. Therefore, the E&F Committee Chairs have implemented a committee attendance policy, as outlined in the CAC bylaws. The policy is as follows:

**To maintain certification as a voting school on the E&F Committee, a school must not miss more than three consecutive committee meetings. Any school with no members present for three consecutive meetings may be de-certified by the committee chairs due to non-participation.** Decertification would prevent the school from voting on recommendations and reports at the committee level.

**HIGH SCHOOL** (based on staffing ratio of 28/class)

<b><i>Listed Alphabetically</i></b>	<b>2012-2013</b>	<b>2013-2014</b>	<b>2014-2015</b>	<b>2015-2016</b>	<b>2016-2017</b>
Bartlett High School	94.61%	94.85%	95.44%	95.92%	94.01%
Elgin High School	87.71%	91.09%	92.99%	91.67%	91.33%
Larkin High School	70.03%	68.66%	66.83%	66.86%	64.07%
South Elgin High School	87.61%	88.35%	89.40%	87.67%	86.33%
Streamwood High School	83.14%	81.59%	81.66%	81.65%	79.77%

\* The Overview chart uses the "Administration Capacity Breakdown" numbers for elementary schools to show capacity trends over the next five years, if the staffing ratios were to remain as they currently are: 28:1 K-3 and 33:1 4-6. These figures do not take into consideration the reduced staffing ratio for Bilingual Education (90% of General Ed) or other special programs (such as self-contained special education and all-day kindergarten), which would mean the schools that house these programs may be using space differently and would have less space than the stated capacities.

Elementary and Middle School boundaries went into effect 2004-2005. High School boundaries went into effect 2005-2006.

(A) Actual enrollment for each school year as of the last school day in September, for the years listed through 2011-2012.

(B) Includes the following: All Self-Contained Special Education classes including Pre-school, Moving-On, Low Incidence, Private Placement, and Home & Hospital.

(C) Includes the following: Adult Education and Alternative Education.

(D) The survival rate for each grade level is an average of the survival rates at each grade level for the previous years.

(E) Kindergarten numbers are based upon live births from area hospitals for years 2000-2001 thru 2010-2011. A ratio of kindergarten enrollments to live births was developed for kindergarten enrollment years 2006-2007 thru 2011-2012 based on live births from 2000-2001 thru 2005-2006. The average ratio was applied to the recorded births for 2006-2007 thru 2010-2011 to obtain kindergarten projections for years 2012-2013 thru 2016-2017. Refer to Kindergarten Projections on the following page.

(F) The "Special Education" Projection is calculated using the following formula:

$$F = (\text{Current enrollment B/Current K-12}) * \text{K-12 Projected Enrollment}$$

(G) The "other" projection is calculated using the following formula:

$$G = (\text{Current enrollment C/Current K-12}) * \text{K-12 Projected Enrollment}$$

**Note:**

25 students per classroom = Optimal goal whenever possible  
 28 students per classroom = General guidelines for staffing purposes  
 30 students per classroom = Average physical capacity of individual space

Determining capacity at 25 to a classroom: number of classrooms x 25 = capacity  
 Determining capacity at 28 to a classroom: number of classrooms x 28 = capacity  
 Determining capacity at 30 to a classroom: number of classrooms x 30 = capacity  
 Kindergarten classrooms are counted twice to determine capacity.

\* The schools marked by an asterisk are currently using mobile classrooms. Refer to the individual school page to confirm the number of mobile classrooms shown as currently in use. These schools are listed twice - to show the architectural capacity on the first line, and the actual capacity (architectural capacity plus mobile classrooms in use) on the second line.

# Pre-K: In addition to General Education (Regular Ed., ELL, Self-contained Spec. Ed.) classes and/or All Day Kindergarten classes, these schools also offer Pre-School classes. Because of this, the "Percentage Filled" may appear artificially low. These schools are in fact more utilized than the data would suggest. These schools are listed twice - to show the capacity based on the K-6 enrollment on the first line, and the capacity based on the total enrollment of the school on the second line.

**NOTE: All Day Kindergarten used 5 classrooms. All other classrooms were utilized for Pre-school enrollment.**

Elementary and Middle School boundaries went into effect 2004-2005. High School boundaries went into effect 2005-2006.

(a) Kindergarten Rooms = Designed specifically for early learners and provides 2 half day classes

(b) Regular Ed Rooms = Designed to support regular classroom use and meets or exceeds 700 gsf

(d) Survival rates and projections may vary by school due to special programs, and do not include students from new developments that may substantially impact some schools.

(e) Based on the New Developments pages: the total number of students projected from the developments located in this school's attendance area for the school years listed.

(f) Students moving on from All Day Kindergarten classes attend elementary schools throughout U-46. There is no "Attendance Area", per se, for this school.

\* S-C Special Education projections are based on the district average S-C Special Education enrollment of 11, times the special concerns site recommendation of: 0

\*\* The Bilingual enrollment is included in the Actual Enrollment most recent school year data.

Elementary and Middle School boundaries went into effect 2004-2005. High School boundaries went into effect 2005-2006.

(d) Survival rates and projections may vary by school due to special programs, and do not include students from new developments that may substantially impact some schools.

(e) Based on the New Developments pages: the total number of students projected from the developments located in this school's attendance area for the school years listed.

(g) Actual Enrollment: 2005-2006 and later data were adjusted to 'true up' Special Education numbers per Administration. Prior Years were not adjusted.

\* S-C Special Education projections are based on the district average S-C Special Education enrollment of 11, times the special concerns site recommendation of:                      3

\*\* The Bilingual enrollment is included in the Actual Enrollment most recent school year data.

Note:

There are only three significant categories provided in this chart. Because of the similarity of yields of all types of attached single-family dwelling units, only one category is provided. The same is true of apartments; thus only one category. Because of the relatively short history of some newer types of detached and attached single-family units, individual evaluations may be necessary.

**Residentially Zoned Vacant Land in U-46**

The committee continues to track vacant land in the district that is zoned for residential development. Large tracts of vacant, residentially zoned property exist in the southern end of the district. A developer is interested in 67 acres adjacent to Bartlett H.S. A considerable amount of land in the far north central and far western areas that fit into this category over the past few years, is currently under development (anywhere from proposed to under construction). This committee and the District need to continue this work, especially with local Municipal and Township officials, to obtain pertinent information regarding vacant residentially zoned land. This needs to be an ongoing process to ensure that the district is aware of land that could produce future students, and if necessary, become involved in obtaining land for future school sites while the land is still available for such a need.

<b><u>Community</u></b>	<b><u>Acreage</u></b>	<b><u>Schools affected</u></b>
Bartlett (DuPage County)	3.84 (potential commercial) 14 (adjacent to BHS) 27.86 (Stearns & Munger - pot'l com'l) 20 (Bartlett Rd/ICRR)	Centennial/Eastview/BHS Hawk Hollow/Eastview/BHS Liberty/Kenyon Woods/SEHS Sycamore Trails/Eastview/BHS
Bartlett (Cook County)	69 (NW corner W.Bartlett/Naperville) 97 (NW&NE corner Rt.59/W.Bartlett)	Liberty/Kenyon Woods/SEHS Liberty/Kenyon Woods/SEHS (NW) Bartlett Elementary/Eastview/SEHS (NE)
Carol Stream	small in-fill property	Spring Trail/Eastview/BHS
